

VIVEK SINHA - SENIOR SOFTWARE ENGINEER – JAVA/REACT/ANGULAR

Bengaluru, India | 8586023643 | viveksinha0012@gmail.com |  [GitHub](#) |  [LinkedIn](#)

A highly skilled Full Stack with 6.3 years of hands-on experience in designing and developing scalable applications using Java and microservices architecture. Proficient in React,Angular,Spring Boot, Hibernate, and implementing RESTful services. Strong expertise in front-end technologies such as Angular and React, with a solid background in full-stack development. Adept at working with cloud platforms and containerization tools like Docker and Kubernetes. Passionate about delivering high-quality, efficient code and driving solutions that align with business objectives.

KEY SKILLS

Full Stack Development | Application Development | Single Page Applications (SPA) | Frontend Development| REST Services | Spring | Spring MVC | Spring Boot | Spring Cloud | TDD (Test Driven Development) | Reactive Programming (Web Flux) | Responsive Design | CI/CD Code Deployment | Agile Methodologies (Scrum)

TOOLS & TECHNOLOGIES

Languages:	Java, JavaScript, SQL,React, Angular
Frameworks:	Spring Boot, Apache Maven, Spring MVC, Spring Security, Hibernate, Junit, Agile Methodology (Scrum), Kafka, RabbitMQ
	Angular, Next.js, React.js
Skills:	Data Structures and Algorithms, Problem Solving, MYSQL,State
	Angular,ReactJs,Java,Management,Redux,NGRX
Developer Tools:	IntelliJ Idea, Visual Studio Code, Maven, GitHub, Jenkins, Postman,Finacle,CMS-sitecore,

PROFESSIONAL EXPERIENCE

Senior Software Engineer GSS India (ENBD Client)	Bengaluru,India 02/2025 - Current
Senior Software Engineer Altimetrik India PayPal Bangalore (Client)	Bengaluru, India 05/2023 – 04/2024
Senior Software Engineer Accolite Digital	Bengaluru, India 12/2020 – 12/2022
Software Engineer Happiest Minds	Bengaluru, India 02/2019 – 08/2020
Software Engineer Futorix Solutions	Bengaluru, India 03/2018 – 02/2019

ROLES & RESPONSIBILITIES

Client: ENBD(Bangalore)

Roles:
Worked on credit card payment, Fawry payment, Egypt,Loan Settlement.

Backend

- Implements the product’s **technical requirements**, builds features, and ensures functionality.
- Implement **business logic, APIs, and database interactions**.
- Write unit tests, integration tests, and end-to-end tests using tools like **JUnit, Mockito**
- Manage **application deployment** to on premise server
- Participate in **daily stand-ups, sprint planning, and retrospectives** as part of an Agile/Scrum team.
- Credit card: Integrating bawaba apis for credit card settlement.
- Encrypting and decrypting request and response payload
- Used Threadlocal for reusability
- Testing
- Implemented loan settlement feature (early and partial) on retail application layer.

- Provide **maintenance** and **support** for existing applications, including bug fixes and updates.
- Used AWS S3 service for bucket creating and storing account statement via maktaba
- Used managed service – Loan Balancers

Frontend

- Build **responsive** and user-friendly interfaces using web technologies like HTML, CSS, JavaScript, and front-end library **react.js**.
- **Angular Karma to jest migration**
- Creation of components and using best design practises like DRY and KISS.
- Ensure **cross-browser compatibility** and optimal performance of the UI.
- Wrote plenty of test cases to make sure cc is 100%

Responsibilities:

- Write clean, maintainable, and **scalable** code.
- Collaborate with product managers and designers to understand requirements.
- Perform **code reviews** to maintain code quality.
- **Fix** bugs and optimize performance.
- Implement **testing** and debugging procedures.
- Document code, APIs, and technical processes.

PROJECTS(Past)

Cookie and Consent Platform - Redis Backend

- Implemented a **Redis caching solution** within a Spring Boot application to enhance performance and reduce latency for frequently accessed data.
- Utilized **object-oriented programming** to incorporate various **design patterns** like **Factory Method**, **Dependency Injection**, **Chain of Responsibility**, **Adapter**, **Singleton**, **Facade**, **Proxy**, and **CQRS**, creating efficient, reusable code modules and improving overall application performance.
- Used **MongoDB** as the primary **NoSQL database** while working with relational databases.
- Utilized **CI/CD tools** like **Jenkins** to automate build, test, and deployment pipelines, reducing the release cycle by **30%**.
- Managed **containerized microservices** using **Docker** and orchestrated deployments with **Kubernetes**, ensuring reliable, scalable, and secure infrastructure.
- Developed **automated unit tests** with **JUnit**, ensuring high code quality and reducing bugs in production.
- Worked in an **Agile environment**, collaborating closely with **product management**, **infrastructure**, and **security teams** to align technical specifications with business requirements.
- Provided **mentorship** to junior developers, fostering knowledge sharing and promoting **best practices** across the team.
- Created a dedicated service for **caching operations**, including methods to save, retrieve, and delete cache entries.
- Leveraged **RedisTemplate** for CRUD operations, enabling efficient data storage and retrieval with expiration settings to manage the cache lifecycle.
- Designed **REST services** to facilitate cache interaction, handling user requests and cache management efficiently.
- Achieved significant **performance improvements**, reducing database load and response times for data retrieval.
- Successfully demonstrated the benefits of **caching** by analyzing **performance metrics** before and after implementation.
- **Improved system scalability by 40%** through the implementation of **Redis caching**, reducing database load and significantly enhancing the speed of **API responses** for high-traffic endpoints.
- Reduced **session management latency by 70%** by integrating **Redis** for distributed session storage, ensuring seamless user experiences across multiple services in a **microservices architecture**.
- AWS – EC2 to host applications
- AWS IAM for setting up user roles.

Microservice Development and Testing and Api integration with Angular (Flexential)

- **Developed Monitoring Application** to various alerts triggered via sensors in **data centers**.

- Utilized **Kafka messaging** to communicate with consumer applications, listening to various events triggered from downstream services (**data center service**).
- Successfully decoupled the application using principles of **hexagonal architecture**.
- **Reduced API load time** by using **reactive programming** in **React**.
- Integrated **Postgres** with the **outbox table** for transactions (rollback/commit).
- Utilized the **Plotly graph library** in the frontend with the **Angular framework** to create and display various charts
- Used **SWAGGER** for **OpenAPI documentation**.
- Utilized **Jest** and **Mockito** for testing functionalities.
- Employed **Java Stream API** and **Lambda API** to handle data parallelism.
- **Architected and scaled APIs** to ensure peak project performance, maximizing **reliability and scalability**.
- Delivered robust backend solutions using **Core Java**, **MySQL**, and **microservices**, enhancing the software’s functionality and resilience.
- Actively involved in **debugging, testing**, and handling the end-to-end **software development lifecycle** to ensure quality delivery.
- **Reduced client-reported incidents by 20%**, demonstrating proficiency in **issue resolution, troubleshooting**, and systematic **debugging techniques**.

Human Resource Management System (HRMS) – Onboarding and Offer Generation (April 2018 – Feb 2019) (Futorix)

- Developed backend logic for **Onboarding** and **Offer Generation** using **Node.js** and frontend with **Angular**.
- Created **Components** and **Services** in **Angular**.
- Used **Observables** and **Promises** to achieve asynchrony and **RxJS** to manage side effects.
- Incorporated **NgRx** for state management.
- Used **JWT authentication** for authorizing users based on roles.
- Performed **Database optimization** using **connection pooling**.
- Developed a **File Management service** for downloading and uploading files.
- Created UI satisfying business logic, integrated APIs, and implemented **JWT authentication** and **PgPromise** for transactions.
- Followed **TDD** practices, achieving 85% code coverage in both frontend and backend using **Jasmine** and **Jest**.
- Orchestrated **API management** within an **MVC architecture**, optimizing interactions with relational databases.
- Executed rigorous testing and debugging, reducing system downtime by 25% and significantly boosting process reliability.

EDUCATION

B.Tech Mechanical Engineering	Bharath University (2011-2015)	7.6 CGPA
12 TH	DAV Public School (2009-2011)	63%
10 TH	Vivekananda Central School (2008-2009)	76%

CERTIFICATIONS

- Obtained Microservices certification using SAGA and OUTBOX (author: [Ali Gelenler](#))
- Obtains aws certifications from UDEMY for AWS associate certified developer DVA-C01 (author: [Stephane-maarek](#))
